* Data of the Consolidated Financial Statements, rounded to the nearest billion RUB

The main factor that influenced the growth in the consolidated revenue is an increase in revenue from electricity transmission due to growth in the scope of services and boiler tariffs.

Operating expenses of the Group of Companies following the results of 3 months of 2024 amounted to RUB 30.7 bln, which is 8.5% higher than the same indicator last year.

The increase in the cost of electricity transmission services is due to growth in the cost of services of territorial grid organizations (TGO) because of an increase in the average TGO tariff, as well as an increase in the cost of electricity transmission services through federal grids due to an increase in rates for maintenance of electric grid facilities in UNEG grids.

The increase in electricity costs to compensate for technological losses was due to growth in the amount of losses because of the increased volume of electricity transmission.

The increase in other operating expenses was caused by both inflationary growth in prices and an increase in the volume of non-regulated services compared to the previous year.

An additional factor that influenced the growth of operating expenses was an increase in the cost of employee benefits, due to the indexation of wages and payment for overtime work in the elimination of power outages caused by adverse natural phenomena, as well as an increase in depreciation charges due to the commissioning of items of property, plant and equipment as a result of the implementation of the Investment Program.
